

Anurup Krishna

Ann Arbor, MI | +1 (469) 662-8562 | krishnau@umich.edu

SUMMARY

AI/ML Engineer with production-facing experience building LLM-based systems, RAG pipelines, and agentic workflows. Strong Python expertise, end-to-end ML pipelines, evaluation and observability, and cloud deployment (AWS/Azure). Experienced translating ambiguous product requirements into deployed systems, presenting technical results to stakeholders, and shipping production-grade code.

EDUCATION

University of Michigan, Ann Arbor, MI

Dec 2025

Master of Science in Electrical and Computer Engineering

GPA: 3.66 / 4.00

Indian Institute of Technology (IIT BHU), Varanasi, India

May 2024

Bachelor's Degree in Electronics Engineering

GPA: 8.65 / 10.00

WORK EXPERIENCE

Giving to the Nations, Inc.

Feb 2026 - Present

Marketing and Business Development

Oak Creek, WI

- Worked with the board on data-driven consumer research, demand analysis, and refining outreach strategies.
- Suggested website design changes on Wordpress and created social media content using Canva to improve engagement.

University of Michigan – School of Social Work

Aug 2025 - Dec 2025

Digital Accessibility Student Associate

Ann Arbor, MI

- Remediated 5+ online courses to achieve 90%+ Panorama accessibility scores and WCAG 2.1 AA compliance for course materials.
- Remediated PDF and Word documents using Adobe Acrobat and Grackle; collaborated with faculty to improve accessibility practices.

University of Michigan Arts Engine

Jan 2025 - Dec 2025

Programmer / Research Support Intern

Ann Arbor, MI

- Contributed to TAMIE (Trainable Accessible Music Instruments and Environments) research; designed and tested digital musical instruments for individuals with physical disabilities.
- Applied DSP, filtering, ML and statistical methods to map movement patterns to musical outputs and improve auditory rendering.
- Implemented version-controlled Python pipelines; used Git when integrating research code into shared repositories.

University of Michigan Multidisciplinary Design Program

Jan 2025 - Dec 2025

Software Engineer Intern

Ann Arbor, MI

- Developed an AI review agent to detect inconsistencies in NSF research proposal PDFs using Azure AI, OpenAI SDK, and LangChain; implemented RAG with embeddings and vector retrieval for context-aware reasoning. Reached a detection accuracy of more than 70%.
- Containerized services with Docker and built CI/CD-friendly Python pipelines; supported deployment on AWS Fargate for production testing.
- Designed evaluation and benchmarking frameworks (ground-truth datasets, automated tests, metric dashboards) to measure retrieval quality, hallucination rates, and end-to-end accuracy.
- Presented weekly demos and technical readouts to program leads, translating technical findings for non-technical stakeholders.

RESEARCH PROJECTS

Multi-disciplinary Project

Oct 2022 - Dec 2023

Research Intern

India

- Designed ML-inspired linear state estimators and data pipelines for tracking State of Health (SoH) of Li-ion batteries using Sandia National Labs cycling datasets; achieved less than 10% relative error across models.
- Produced performance analyses and visualizations with Matplotlib and Tableau; contributed to two co-authored peer-reviewed publications.

PUBLICATIONS

- Das, Kaushik, Roushan Kumar, and **Anurup Krishna**. "Analyzing electric vehicle battery health performance using supervised machine learning." Renewable and Sustainable Energy Reviews (2024).
- Kumar, R., Das, K., & **Krishna, A.** "Comparative analysis of data-driven electric vehicle battery health models across different operating conditions." Energy (2024).

SKILLS

Programming	Python, TypeScript (familiar), JavaScript, R
LLMs / Agents	OpenAI SDK, LangChain, LangGraph / agentic frameworks exposure, RAG, embeddings, vector DBs
ML / Eval	NumPy, SciPy, Pandas, Scikit-learn, evaluation and observability (LangSmith, W&B, Arize concepts)
Cloud / DevOps	AWS (Fargate), Azure AI, Docker, Git, CI/CD basics
Tools	OpenAI, Anthropic (APIs), LangChain, GitHub
